

Turk's Cap, New Texas Superstar Plant

By: Melinda Sperl

Turk's Cap was newly added to the Texas Superstar list. Though not new to Texas, as it is a native to South Texas, when it comes to our climate and soil, it is a very tough, versatile plant that deserves to be called a Superstar. This is an extremely drought tolerant plant that attracts birds and butterflies yet will take some shade and has adapted well over the entire state. While most natives will tolerate our cold some varieties are more cold tolerant than others. Plants are now being developed that have new colors with varying cold tolerances.

Texas Superstar Plants are plants that are highly recommended by Texas A&M Agrilife. These plants have been chosen based on their quality and reliability for performing well in Texas Landscapes. Find out more at www.texassuperstar.com.

Happy Gardening!
